Bracebridge, ON, P1L 1V7

Subject: **Testimony on Power Flo**
Attention: **To Whom It May Concern -**

Muskoka Containerized Services was attracted to the unique properties of Forsythe's Power Flo hydraulic fluid. Having a fluid that is Environmentally Approved, fire-resistant, bio-degradable, non-toxic and water soluble, provided MCS with a solution to environmental issues which surround the use of Mineral Oil and Vegetable Oil fluids.

On May 9, 2006 we conducted a trial of the Power Flo in one of our Labrie Expert 2000 Side Loaders, operating on HVI 32 Mineral Oil hydraulic fluid. The vehicle had previously experienced some leaks, hose failure, and noisy operation, during hot summer conditions. After installing a Temperature Data Logger, in the reservoir, we discovered a significant decrease in the operating temperature using Power Flo.

The vehicle presently has over 5000 hours, and we have noticed a significant improvement in overall operating performance since switching to Power Flo. We have not experienced any leaks or blown hydraulic hoses, and discovered the truck was noticeably quieter when first engaged or operating.

We have converted 12 vehicles to Power Flo, with a goal of going "Green" by converting our entire fleet.

Sincerely,

Brian Laws
Operations Manager
